

How Install Python in Linux

1.First we are working by **Terminal** for now :

```
sudo add-apt-repository ppa:deadsnakes/ppa -y
sudo add-apt-repository ppa:deadsnakes/nightly -y
sudo apt update
sudo apt install python3.11
python3.11 -version
```

=====

package :

```
sudo apt install python3.11-dbg
sudo apt install python3.11-dev
sudo apt install python3.11-venv
sudo apt install python3.11-distutils
sudo apt install python3.11-lib2to3
sudo apt install python3.11-gdbm
sudo apt install python3.11-tk
sudo apt install python3.11-full
```

=====

Install pip :

```
sudo apt install python3-pip
wget https://bootstrap.pypa.io/get-pip.py
python3 get-pip.py
python3 -m pip install --upgrade pip
pip --version
```
